To Whom It May Concern:

I am writing to highly recommend Mr. Wong Wai Yin, Henry, who served as an Assistant R&D Engineer at ATAL Building Services Engineering Limited for a period of 10 months. During his tenure, Henry made significant contributions to our projects and demonstrated exceptional skills and dedication.

Henry's expertise spans a wide range of areas, including predictive modelling, data structure design, data analysis and web server implementation. He conducted thorough studies on applications of AWS SageMaker to build, train, and deploy machine learning models tailored to our specific use cases. Besides, he played a pivotal role in conducting Proof of Concept on AWS Bedrock Generative AI within the context of facility management.

Henry consistently delivered high-quality work, showcasing his strong mathematical skills and programming knowledge. His proficiency in software development was evident as he seamlessly integrated complex algorithms into our existing infrastructure. Moreover, Henry's communication skills allowed him to effectively collaborate with team members and convey technical concepts in an understandable manner.

One of Henry's notable achievements was enhancing the physics-guided machine learning algorithm as well as improving the survival model fitting. This advancement demonstrated his ability to apply theoretical knowledge to practical problems, yielding significant improvements in our predictive modelling capabilities.

In summary, Henry is a highly skilled and motivated R&D engineer with a strong background in both theoretical and practical aspects of engineering and data science. His contributions to our team were invaluable, and I am confident that he will continue to excel in any future endeavours. I wholeheartedly recommend him for any position that aligns with his expertise.

Yours faithfully,

Pan Lee (Dr.)
